

# Revit – New for Revit

## Overview

---

**Course Length:** 8 hours *(can be taken via flexible schedule in-center or remotely)*

**Description:** New for Revit is designed to give you a solid understanding of new and enhanced features that will enable you to create consistent, coordinated, and complete modeling for multidiscipline design.

Autodesk Revit is software for architectural design, MEP, and structural engineering, and a solution for collaborative BIM; its powerful tools let you use the intelligent model-based process to plan, design, construct, and manage buildings and infrastructure.

## Course Objectives/Topics

---

### Students will learn to use:

- Core Product Enhancements
- Organizing Views
- Fill Patterns
- Levels in 3D Views
- Rule-Based Filters
- Steel Fabrication Elements with Weldments

## Prerequisites

---

No prerequisites are required, but experience with architectural design, drafting or engineering experience is helpful.

## Audience

---

New and existing users to Autodesk Revit.
